Let K be a convex body in \mathbb{R}^n . $u \in S^{n-1}$. The parallel section function $A_{K,u}(t)$ is defined by

$$A_{K,u}(t) = \operatorname{Vol}_{n-1}(K \cap (u^{\perp} + tu)),$$

for $t \in \mathbb{R}$.

Here, $u^{\perp} = \{x \in \mathbb{R}^n : \langle x, u \rangle = 0\}.$

・ 同 ト ・ ヨ ト ・ ヨ ト

<ロ> (四) (四) (注) (注) (三)

The inner section function m_K is defined by

$$m_{\mathcal{K}}(u) = \max_{t \in \mathbb{R}} A_{\mathcal{K},u}(t),$$

for $u \in S^{n-1}$.

u

u

Remark: $m_{\mathcal{K}}(u)$ does not change under translations and reflections in the origin.

(1日) (日) (日)

Remark: $m_{\mathcal{K}}(u)$ does not change under translations and reflections in the origin.

The inner section function and cross-section bodies were studied by Meyer, Makai, Martini, Ódor, Brehm,...

伺 と く き と く き とう

In 1969, V. Klee asked whether a convex body is uniquely determined (up to translation and reflection in the origin) by its inner section function.

・ 回 と ・ ヨ と ・ ヨ と …

In 1969, V. Klee asked whether a convex body is uniquely determined (up to translation and reflection in the origin) by its inner section function.

That is, given two convex bodies K and L such that

$$m_{\mathcal{K}}(u) = m_{\mathcal{L}}(u), \qquad \forall u \in S^{n-1},$$

is it true that $K = \pm L + a$?

回 と く ヨ と く ヨ と

御 と く ヨ と く ヨ と …

Indeed, by Brunn's theorem,

$$\operatorname{Vol}_{n-1}(K \cap u^{\perp}) = m_K(u) = m_L(u) = \operatorname{Vol}_{n-1}(L \cap u^{\perp}), \quad \forall u \in S^{n-1}.$$

Indeed, by Brunn's theorem,

$$\operatorname{Vol}_{n-1}(K \cap u^{\perp}) = m_K(u) = m_L(u) = \operatorname{Vol}_{n-1}(L \cap u^{\perp}), \quad \forall u \in S^{n-1}.$$

Thus, $\forall u \in S^{n-1}$,

$$\int_{S^{n-1}\cap u^{\perp}}\rho_K^{n-1}(\theta)\ d\theta=\int_{S^{n-1}\cap u^{\perp}}\rho_L^{n-1}(\theta)\ d\theta.$$

Indeed, by Brunn's theorem,

$$\operatorname{Vol}_{n-1}(K\cap u^{\perp}) = m_K(u) = m_L(u) = \operatorname{Vol}_{n-1}(L\cap u^{\perp}), \qquad \forall u \in S^{n-1}.$$

Thus, $\forall u \in S^{n-1}$,

$$\int_{\mathcal{S}^{n-1}\cap u^{\perp}}
ho_{K}^{n-1}(heta)\;d heta=\int_{\mathcal{S}^{n-1}\cap u^{\perp}}
ho_{L}^{n-1}(heta)\;d heta.$$

Denoting by R the spherical Radon transform, we have

Indeed, by Brunn's theorem,

$$\operatorname{Vol}_{n-1}(K \cap u^{\perp}) = m_K(u) = m_L(u) = \operatorname{Vol}_{n-1}(L \cap u^{\perp}), \qquad \forall u \in S^{n-1}.$$

Thus, $\forall u \in S^{n-1}$,

$$\int_{\mathcal{S}^{n-1}\cap u^{\perp}}
ho_K^{n-1}(heta)\;d heta=\int_{\mathcal{S}^{n-1}\cap u^{\perp}}
ho_L^{n-1}(heta)\;d heta.$$

Denoting by R the spherical Radon transform, we have

$$R\rho_K^{n-1} = R\rho_L^{n-1} \quad \Rightarrow \quad \rho_K^{n-1} = \rho_L^{n-1} \quad \Rightarrow \quad K = L.$$

What about general convex bodies (not necessarily symmetric)?

・ 同 ト ・ ヨ ト ・ ヨ ト

What about general convex bodies (not necessarily symmetric)?

It is well known that in \mathbb{R}^2 the answer to Klee's problem is negative.

(4月) (4日) (4日)

What about general convex bodies (not necessarily symmetric)?

It is well known that in \mathbb{R}^2 the answer to Klee's problem is negative. Bodies of constant width provide counterexamples.

Theorem

There exist convex bodies K and L in \mathbb{R}^n , $n \ge 3$, such that K is not centrally symmetric, L is origin-symmetric, and $m_K = m_L$.

・ 回 ト ・ ヨ ト ・ ヨ ト

$$\rho_{\mathcal{K}}(x) = (|x|^3 + \epsilon x_n^3)^{-1/3}, \qquad x \in \mathbb{R}^n \setminus \{0\},$$

$$\rho_{\mathcal{K}}(x) = (|x|^3 + \epsilon x_n^3)^{-1/3}, \qquad x \in \mathbb{R}^n \setminus \{0\},$$

or equivalently

$$\rho_{\mathcal{K}}(\phi) = \left(1 + \epsilon \cos^3 \phi\right)^{-1/3},$$

where $0 \le \phi \le \pi$ is the angle with the positive x_n -axis.

(1日) (日) (日)

$$\rho_{\mathcal{K}}(x) = (|x|^3 + \epsilon x_n^3)^{-1/3}, \qquad x \in \mathbb{R}^n \setminus \{0\},$$

or equivalently

$$\rho_{\mathcal{K}}(\phi) = \left(1 + \epsilon \cos^3 \phi\right)^{-1/3},$$

where $0 \le \phi \le \pi$ is the angle with the positive x_n -axis.

One can check that

• K is convex for small enough $\epsilon > 0$,

不同下 不至下 不至下

$$\rho_{\mathcal{K}}(x) = (|x|^3 + \epsilon x_n^3)^{-1/3}, \qquad x \in \mathbb{R}^n \setminus \{0\},$$

Define a new body L by

$$\rho_L(u) = \left((n-1)(R^{-1}m_K)(u)\right)^{1/(n-1)},$$

for all $u \in S^{n-1}$.

If we show that L is an origin-symmetric convex body (for small enough ε), then we are done, since

$$m_L(u) = \operatorname{Vol}_{n-1}(L \cap u^{\perp}) = \frac{1}{n-1}(R\rho_L^{n-1})(u)$$

= $(R(R^{-1}m_K))(u) = m_K(u),$

for all $u \in S^{n-1}$.

・ 何 ト ・ ヨ ト ・ ヨ ト

By Lemma,

$$\rho_L(u) = \left(1 + (R^{-1}g_{\varepsilon})(u)\varepsilon\right)^{1/(n-1)}.$$

◆□ ▶ ◆□ ▶ ◆ □ ▶ ◆ □ ▶ ◆ □ ◆ ○ へ ○

By Lemma,

$$\rho_L(u) = \left(1 + (R^{-1}g_{\varepsilon})(u)\varepsilon\right)^{1/(n-1)}.$$

We will use Fourier transform techniques of Koldobsky. Extend g_{ε} to a homogeneous of degree -1 function on $\mathbb{R}^n \setminus \{o\}$. Then,

$$(R^{-1}g_{\varepsilon})(u)=\frac{\pi}{(2\pi)^n}\widehat{g}_{\varepsilon}(u),$$

for $u \in S^{n-1}$. Hence,

$$\rho_L(u) = \left(1 + \frac{\pi}{(2\pi)^n} \widehat{g}_{\varepsilon}(u)\varepsilon\right)^{1/(n-1)},$$

for all $u \in S^{n-1}$.

伺下 イヨト イヨト

The Fourier transform $\widehat{g_{\varepsilon}}$ can be computed.

The Fourier transform $\widehat{g_{\varepsilon}}$ can be computed. Define

$$G_{\varepsilon,u}(z) = (1-z^2)^{(n-3)/2} \int_{S^{n-1} \cap u^{\perp}} g_{\varepsilon}(zu + \sqrt{1-z^2} v) dv,$$

for $-1 \leq z \leq 1$. Then, for $k = 0, 1, \ldots$, there are constants $c_3(k, n)$ such that

$$|G_{\varepsilon,u}^{(k)}(0)| \leq c_3(k,n),$$

for $u \in S^{n-1}$.

(ロ) (同) (E) (E) (E)

If *n* is even, then $\widehat{g}_{\varepsilon}(u) = (-1)^{(n-2)/2} \pi G_{\varepsilon,u}^{(n-2)}(0)$.

◆□▶ ◆□▶ ◆目▶ ◆目▶ ●目 - のへで

If *n* is even, then $\widehat{g_{\varepsilon}}(u) = (-1)^{(n-2)/2} \pi G_{\varepsilon,u}^{(n-2)}(0)$. If *n* is odd, then $\widehat{g_{\varepsilon}}(u) = (-1)^{(n-1)/2} (n-2)! (I_{\varepsilon}(u) + \Sigma_{\varepsilon}(u))$, where

$$I_{\varepsilon}(u) = \int_{-1}^{1} |z|^{-n+1} \left(G_{\varepsilon,u}(z) - \sum_{k=0}^{n-2} G_{\varepsilon,u}^{(k)}(0) \frac{z^k}{k!} \right) dz$$

and

$$\Sigma_{arepsilon}(u) = 2\sum\left\{rac{G^{(k)}_{arepsilon,u}(0)}{k!(2+k-n)}: k=0,\ldots,n-3,k ext{ even}
ight\}.$$

・吊り ・ヨン ・ヨン ・ヨ

For both *n* even and odd, $\widehat{g_{\varepsilon}}$ is bounded on S^{n-1} uniformly in ε .

・ロン ・回 と ・ ヨ と ・ ヨ と

For both *n* even and odd, $\widehat{g_{\varepsilon}}$ is bounded on S^{n-1} uniformly in ε . We see that

$$\rho_{L_{\varepsilon}}(u) = \left(1 + \frac{\pi}{(2\pi)^n}\widehat{g_{\varepsilon}}(u)\varepsilon\right)^{1/(n-1)} > 0,$$

for all $u \in S^{n-1}$, and hence L_{ε} is an origin-symmetric star body.
